

TESIL-FIBRES Strategy

Tesil Fibres s.r.o. is a global manufacturer of technical fibers with a long-term ambition to develop sustainable, efficient, and safe production processes.

The main goal for 2026 is to stabilize the company and increase operational efficiency, primarily through the optimization of production plans, increased flexibility, and cost reduction. At the same time, the company will focus on finding new raw materials.

Key steps will include building and operating its own burning center as part of a closed material cycle, constructing a new agglomeration line to expand capacity and process alternative raw materials, obtaining a waste processing permit, and expanding the production portfolio beyond PET fibers.

The company welcomes the deepening of cooperation with its parent company ITERUM, with which it shares a strategy, know-how in the field of secondary raw material processing, and innovative production processes.

At the same time, it will continue to actively seek new customers and business opportunities for special and new types of fibers.

In 2027, Tesil Fibres s.r.o. will focus primarily on further development and growth, strengthening sales and marketing activities, and gradually increasing the added value of its products.

Looking ahead to 2032, the goal is to achieve long-term stabilization of the company and significantly expand its business opportunities.
